New Headquarters Building

Background Designed by the Detroit architectural and engineering firm of Smith, Hinchman & Grylls to be in harmony with the existing Headquarters Building while projecting a character of its own. The new 7-story structure will be joined to the west side of the current building. Included in the project is the construction of a security checkpoint, 3-level parking deck, renovation of the powerhouse, and improved roadways.

Construction Beginning in the spring of 1984, construction will take 40 months. Occupancy is to begin in July of 1987. Salient features include two 7-story office towers connected by a 4-story podium containing technical support facilities and an employee services concourse.

Space The building will consist of gross square feet, providing the Agency with over square feet of usable operational space.
